

Lab 8 – Part 1: Template & Custom Element

Create a name badge template to use on your portfolio web page for Portfolio Night.

REQUIREMENTS:

1. Use `<template>` to create a name badge (see image below).
2. Add your template to 8-modules.html with a custom element.
3. The new custom element should accept your name as content.

Lab 8 – Part 2: Create a Module.

Create a JavaScript file using the Namespace module pattern.

REQUIREMENTS:

1. Create a **citeMe** method that sends a pop-up when someone clicks on the nametag saying, “**DEV-NAME** created this **MOD-NAME** module!”, where DEV-NAME is your name, and MOD-NAME is the name of your module.
2. The name & module name variables should be “private” variables (so that no one can change them!) used by the “public” **citeMe** method.
3. Include it in the html web page.

EXTRA CHALLENGE: Add another `<slot>` to your nametag.
